

How To Build A Dog House Tent

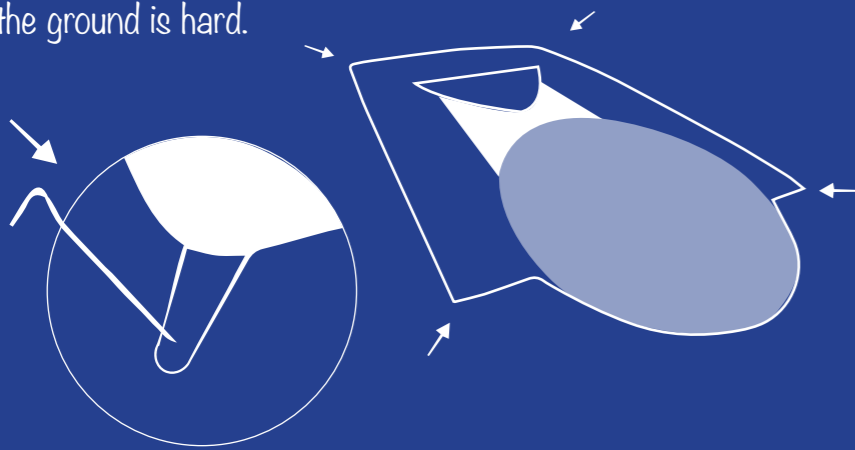

Material List:

- Steel Pole Sections x6
- Tent Pegs x10
- Dog House Water Bowl

Instructions:

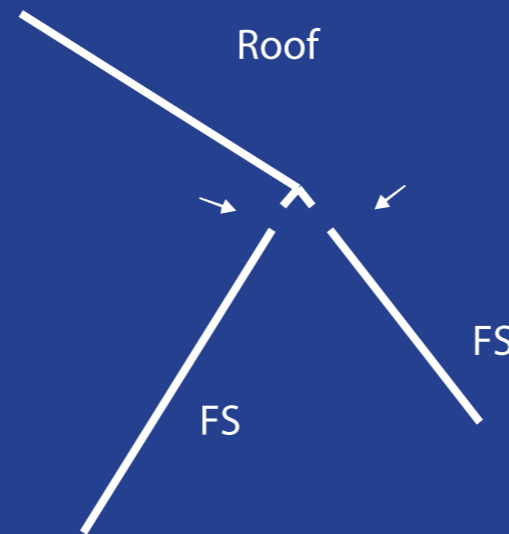

Step1:

Peg all four corners at 45° away from tent. Use a mallet if the ground is hard.

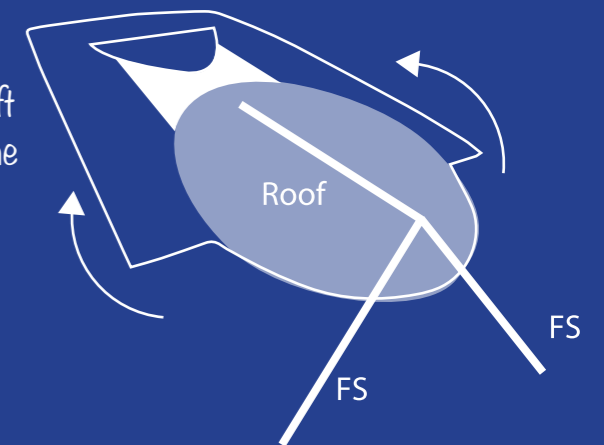

Step2:

To build the pole structure insert rear pole into single 90° socket on the roof pole. Insert both FS poles into the double socket at the front of the roof pole.

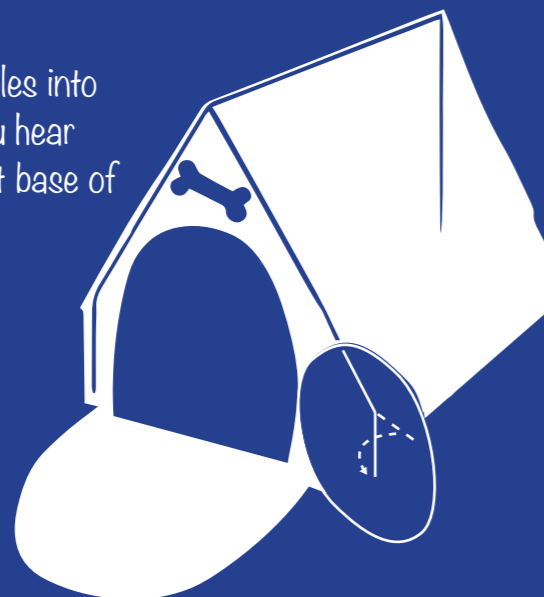

Step3:

Insert rear pole structure into tent opening, carefully push to the back of the tent. Begin to lift the top of the rear pole using the roof pole.

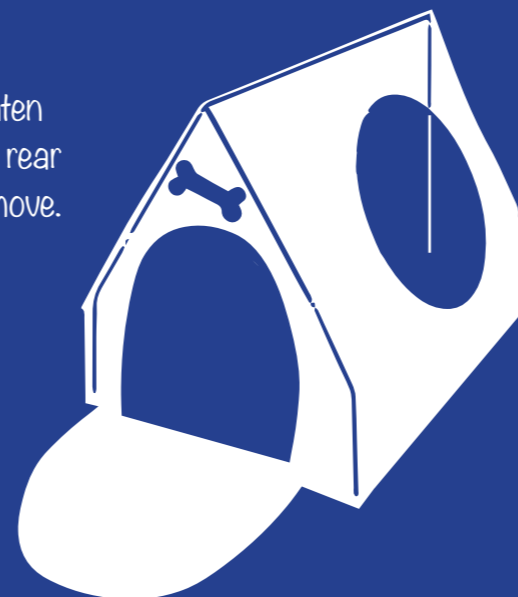

Step4:

Individually insert FA poles into FS poles. Twist until you hear the rivet click and insert base of pole into pocket.

Step5:

From inside the tent, straighten the rear pole. Hook base of rear pole into loop so it will not move.

Step6:

Unravel guy ropes, peg into the ground at 45° away from tent. Evenly tighten each guy rope, pulling tent taut.
